Mohamed Landolsi

GTM Automation & Integration Engineer | B2B AI Workflows, APIs, n8n, Clay

+216 96 857 929 | Tunisia (UTC+1) | Remote B2B Contractor | Open to Relocation |
mohamedlandolsi300@gmail.com | github.com/mohamedlandolsi | linkedin.com/in/mohamedlandolsi

Automation and Integration Engineer bridging Software Engineering and B2B GTM systems. I build scalable AI workflows and integrations using n8n, Clay, and custom APIs. I leverage my technical foundation to handle complex webhooks, write custom code when visual builders hit limits, and translate business processes into robust automations.

Skills

- **GTM Automation & Integration**: n8n, Clay, Webhooks, JSON, API Integration, Lead Enrichment, Apify, Tavily
- **AI & Data Workflows**: LLM Routing, RAG Pipelines, Prompt Engineering, AI Assisted Coding, Agent Skills, Data Modeling, PostgreSQL, Supabase, Documentation
- **Technical Foundation**: Python, FastAPI, JavaScript, REST APIs, System Architecture, BPMN 2.0
- **Tools**: Git & GitHub, Postman, HubSpot, Apollo, Jira, Docker

Work Experience

GTM Systems Engineer 12/2025 to 05/2026
Wavess *Berlin, Germany (Remote)*

- Architected a custom B2B GTM platform unifying intent-data intelligence and LinkedIn outbound automation, replacing fragmented manual workflows for 6 European B2B clients.
- Built automated lead enrichment pipelines with Apify and Tavily APIs using FastAPI to capture signals, feeding an LLM-based ICP scoring engine to rank and prioritize high-intent target accounts.
- Engineered a centralized AI workflow router with quota-aware fallback across 6 LLM providers, ensuring zero downtime for automated outreach while keeping >90% of API costs within free-tier limits.
- Orchestrated asynchronous background workers (ARQ/Redis) to handle large-scale web scraping and RAG enrichment jobs, processing thousands of daily market signals with strict multi-tenant data isolation.

Key Projects

Job Radar | n8n Multi-Source Intelligence Pipeline Self-Directed Automation Project

- Architected a config-driven n8n pipeline aggregating 9 job sources (REST APIs, RSS, web scraping) with deduplication, heuristic pre-filtering, and batched LLM scoring via Google Sheets state management.
- Engineered a dual-provider LLM router (Cerebras → Groq fallback) with per-source error isolation and circuit-breaker patterns, eliminating single points of failure across the workflow.
- Shipped operational telemetry (run stats, provider tracking, failure sampling) and a structured Human-in-the-Loop review queue, enabling auditable and extensible output for downstream GTM outreach.

Personal GTM Engine | B2B Outbound Discovery & Enrichment Self-Directed GTM Engineering Project

- Architected a config-driven n8n outbound engine discovering B2B accounts via Apollo and seed lists, applying deterministic hard filters (size, industry, timezone) before enrichment to guarantee strict zero-cost execution.
- Engineered a waterfall contact enrichment and explainable account scoring model (ICP fit, budget proxies, automation signals) using Clay and Apollo, outputting ranked decision-makers to a Google Sheets state layer.
- Integrated a multi-provider LLM fallback router to draft personalized cold outreach strategies with mandatory Human-in-the-Loop (HITL) approval gates, tracked via per-run operational telemetry and Discord digests.

Additional Experience

- **AI Engineer Intern**, AYCORP Technologies (06/2025 to 08/2025): Prototyped a voice interview pipeline integrating VAPI with Gemini 2.5 Flash and defining API contracts.
- **Full-Stack Developer (Volunteer)**, Stade Nabeulien Rugby Club (06/2025 to 09/2025): Automated scheduling and attendance tracking, replacing manual admin work and saving 3 hours/week.

Education & Languages

IT Business School
Software Engineering (Master's Equivalent) | 2023 - 2026

ISET Nabeul
Bachelor's in IT | 2020 - 2023

Languages
English: Professional
French: Comprehension
Arabic: Native
